

Endavo Media Management System (EMMS) – Release Notes

Release Date: May 20, 2025

This update delivers key interface improvements, enhanced backend monitoring for encoding jobs, and system cleanup for improved media management.

New & Updated Features

Media Editing on React

The media editing interface has been fully migrated to React, delivering a faster, more intuitive, and mobile-friendly editing experience.

Encoding Job Monitoring & Actions

New logic detects when an encoding job is significantly overdue. In such cases, a *Requeue* action will be displayed. If the timing appears normal but a Super Admin wishes to restart encoding, a *Force Request* option will be available.

Duplicate Rendition Cleanup

We executed a system script to identify and remove duplicate renditions for media, ensuring cleaner asset management and improved storage efficiency.

If you have any questions about these updates or would like assistance using the new features, please contact our support team.
